Question: Human Capital Return on Investment
Include Modeled Scores : Yes

Human Capital Return on Investment

Question

Does the company publicly report the following information on a standard human capital return on investment metric, serving as a global measure of the return of the company's human capital programs?

Rationale

The Human Capital Return on Investment provides a means of measuring your company's profitability in relation to total employee costs. It is derived by removing non-employee costs from overall operating costs and deriving the resulting operating profitability.

This metric provides a view into the degree to which economic value is derived looking at profitability solely in relation to human capital costs.

Performance Summary	
Question Level Company Performance	30
Question Weight	20
Year-on-Year Change	(17)
Industry Average Score	41
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

By subtracting **Total Operating Expenses** (b) less **Total employee-related expenses** (salaries + benefits) (c) from **Total Revenue** (a), your company's profitability prior to human capital costs are calculated. Dividing this figure by **Total employee-related expenses** (salaries + benefits) (c) then leads to the ratio that examines your company's level of profitability in relation to the total human capital expenses.

Operating expenses – should be in line with accepted financial accounting and reporting standards including everything a company will have defined in their income statement. Total operating expenses are all the expenses your company has from its operations.

Total Revenue – the amount your company has received in revenues before any deductions are made.

Total employee-related expenses (salaries + benefits) includes training and development programs, pensions, hiring, etc, as it covers all costs directly related to employees. This is an example of how return on investments in human capital can be calculated based on standard financial metrics. If you use another approach, this can be indicated in the following question.

References

GRI Standard 201-1 is relevant for this question.
