Social Reporting - Coverage

Question

Does your company publicly report on quantitative social indicators? If yes, please indicate where the coverage of these indicators is clearly indicated in your public reporting.

Rationale

The quality and availability of the information in the public domain gives an indication of the company's proficiency in social reporting. The greater the scope of the information it discloses, the more it is representative of its business activities as a whole, and the more likely it is to be used by investors as it will provide a more accurate picture of the overall social impacts of the company's business activities.

Key Definitions

Reporting coverage refers to the boundary or the range of entities (e.g. subsidiaries, joint ventures, sub-contractors, etc.) whose performance is presented by the report. Ideally the company reports on its entities for which it has management control and/or over 50% ownership – that would be considered 100%.

Data Requirements

- The first option should only be used if it is publicly stated that the coverage is the same for all social data reported on, or if it is explicitly stated that the coverage applies to the full report.
- If the coverage varies between different indicators, the three with the highest available coverage and their respective coverage should be indicated under the second option.
- In both cases, the coverage must be publicly available and please refer to where in the public domain this information can be found.
