Emissions Reduction Targets

Question

Does the company have corporate-level emissions reduction targets?

Rationale

Most industries are likely to be impacted by climate change, albeit to a varying degree. Consequently, they need to design strategies which are adapted to the size of the challenge for their industry. Whilst the majority of the companies focus on risks associated with the changing climate, some seek to identify and seize the business opportunities linked to these global challenges. Setting emission reduction targets enables companies to adopt a systematic and disciplined approach towards reducing their emissions. With this question, we aim to find out if a company has set absolute and/or relative corporate targets to reduce greenhouse gas emissions.

Performance Summary

Question Level Company Performance	80
Question Weight	15
Year-on-Year Change	0
Industry Average Score	52
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Absolute target: a target that describes a reduction in actual emissions in a future year when compared to a base year.

Intensity target: a target that describes a future reduction in emissions that have been normalized to a business metric when compared to normalized emissions in a base year.

Intensity measure: Grams CO2e or Metric tons CO2e per kilometer, per USD($) value-added, square meter, per unit revenue, per unit FTE employee, per unit hour worked, per unit of production, per unit of service provided etc.

Science-based targets: "Targets adopted by companies to reduce greenhouse gas (GHG) emissions are considered "science-based" if they are in line with the level of decarbonization required to keep global temperature increase below 2 degrees Celsius compared to pre-industrial temperatures, as described in the Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC AR5)." Source: Science-based targets Initiative

Other climate-related targets: Energy productivity, renewable energy consumption, renewable energy production, renewable fuel, waste, zero/low-carbon vehicle, energy usage, land use, methane reduction target, engagement with suppliers etc.

Examples of **overarching initiatives:** RE100, EP100, EV100, Below50 – sustainable fuels, Science-based targets initiative, Reduce short-lived climate pollutants, Remove deforestation, Low-Carbon Technology Partnerships initiative

Data Requirements

We expect companies' to set absolute or relative (intensity) emission targets (Standard Method). However, if no emission targets are set, we give companies the option to report on other climate-related targets under the "Alternative Method" option.

For the Standard Method, if you provide the relative (intensity) target in this question, please also indicate the definition of the intensity measure used (metric). Please note that you can choose to provide absolute or relative targets, and you are not required to provide both.

In case you report Scope 1 and Scope 2 emissions separately, please select the relevant "Scope" option but fill in the rest of the table with combined Scope 1 and Scope 2 emissions figures.

Percentage of emissions in scope: the percentage of the total measured emissions of that particular scope in the base year that your target applies to.

Percentage reduction from base year: a company's emissions reduction targets as a percentage reduction of emissions to be achieved in the target year compared to the base year."

Percentage achieved (emission reductions): the target's percentage completion (in terms of emissions) against the base year emissions. For example, if your target is to reduce your Scope 1 emissions by 10% by 2017 compared with a 2010 base year, and in your reporting year your Scope 1 emissions had reduced by 3% compared to that target base year, your target is 30% complete ((3/10)*100).

Supporting evidences:
No document is required to support your response. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.

Please see how the different fields are referenced in the CDP questionnaire

- Intensity measure: Metric
- Baseline year: Base year
- Target was set in year: Start year
- Emissions of baseline year in absolute tons of CO2e: Base year emissions covered by target (metric tons CO2e)

References

This question refers to **CDP questions C4.1a, C4.1b and C4.2** and **TCFD** recommendation **Metrics and Targets (c).**

The questions in this criterion have been developed in alignment with the CDP (http://www.cdp.net).

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Climate-related Targets	Standard method
The company's selected absolute targets as a climate-related target	Absolute Targets set
The company's absolute target is a science-based target	-
Type of scopes selected for absolute targets for GHG emissions	Scope 1 and scope 2 seperately
The company's percentage emissions in scope for absolute GHG reduction targets	83.5
The company's baseline year for absolute its GHG reduction targets (Fiscal Year)	2016
The company's baseline CO2e emissions value for absolute GHG reduction targets (met. ton. CO2e)	1,300,222.000
The year the company set its absolute GHG reduction target (Fiscal Year)	2016
The company's percentage absolute reduction target	10
The company's target year to achieve its absolute GHG reduction target (Fiscal Year)	2020
The company's percentage emissions achieved towards absolute reduction target	-.043
The company's selected relative targets as a climate-related target	Relative targets set
The company's relative target is a science-based target	-
Type of scopes selected for relative targets for GHG emissions	Scope 1 and scope 2 seperately
The company's percentage emissions in scope for relative GHG reduction targets	83.5
The company's baseline year for its relative GHG reduction targets (Fiscal Year)	2016
The company's baseline CO2e emissions value for relative GHG reduction targets (met. ton. CO2e)	1,300,222.000
The company's value of the relative intensity measure of the baseline year for relative GHG reduction targets	0.295
The year the company set its relative GHG reduction target (Fiscal Year)	2016
The company's percentage relative reduction target	10
The company's target year to achieve its relative GHG reduction target (Fiscal Year)	2020
The company's percentage emissions achieved towards relative reduction target	-.0098
The company's alternative target used	Not answered
The company's selected metric numerator KPI for alternative key climate-related targets	Not answered
The company's selected metric denominator KPI for alternative key climate-related targets	Not answered
The company's baseline year for its alternative key climate-related targets (Fiscal Year)	Not answered
The year the company set a target for its alternative key climate-related targets (Fiscal Year)	Not answered
The company's target year to achieve its alternative key climate-related targets (Fiscal Year)	Not answered
The company's selected KPI in its baseline year for alternative key climate-related targets	Not answered
The company's target year for its alternative key climate-related targets	Not answered
Overarching initiative of which the alternative method target if part of	Not answered

Questionnaire

Does your company have any corporate-level climate-related targets? Please fill out the "Alternative Method" table only if your organization does not use the Standard Method.

1. ◉

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

Standard Method - We have absolute and/or relative (intensity) emissions targets:

Supporting evidence describing your absolute and/or relative (intensity) emissions targets:

	Targets	Is this a science-based target?	Scope	% emissions in Scope	Baseline year	Emission of baseline year in absolute tons of CO2e	Intensity measure / Metric	Target was set in year	% reduction from baseline year	Target year	% achieved (emission reductions)
Absolute targets	1. Targets set 2. No targets set 3. Not known	1. Yes 2. No	1. Scope 1 2. Scope 2 3. Scope 1 and Scope 2 combined 4. Scope 1 and Scope 2, but separately 5. Not known	93.5	2016	1300222		2016	10	2020	.043
Relative (intensity) targets	1. Targets set 2. No targets set 3. Not known	1. Yes 2. No	1. Scope 1 2. Scope 2 3. Scope 1 and Scope 2 combined 4. Scope 1 and Scope 2, but separately 5. Not known	93.5	2016	1300222	Value of baseline intensity measure: .295 Definition of intensity measure used:	2016	10	2020	.0098

2.

Alternative Method - We have other key climate-related targets:

Supporting evidence describing your alternative key-climate related targets:

Target		KPI - Metric numerator	KPI - Metric denominator (for intensity targets only)	Baseline year	Target was set in year	Target year	KPI in baseline year	KPI in target year	Is the target part of an overarching initiative? (please specify)	
Please select		Not answered	Not answered	Not answered	Not answered	Not answered	Not answered	Not answered	Please select	

3. We do not set any targets for GHG emissions.

4. Not applicable. Please provide explanations in the comment box below.

5. Not known
