Packaging Commitment

Question

Does the company have a group-wide commitment and associated programs to improve packaging solutions and is it available publicly?

Rationale

Packaging protects products and has an impact on consumers' decisions to buy a product. However, before and after the use of the product, most packaging ends up in landfill. Therefore, reducing packaging, using reusable packaging and taking into account other environmental considerations is an important factor in reducing the negative impact of the company's product life cycle. This question tests on a broad level whether the packaging policy and strategy includes environmental considerations and risk factors related to unsustainable packaging practices.

Performance Summary	
Question Level Company Performance	100
Question Weight	34
Year-on-Year Change	18
Industry Average Score	20
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Reusable packaging: Packaging which has been designed to accomplish or proves its ability to accomplish a minimum number of trips or rotations in a system for reuse. To qualify as reusable, the packaging needs to be refilled or used again for the same purpose for which it was conceived.

Recyclable packaging: Packaging material which, post-use, can be reprocessed by means of a manufacturing process into a new product, a component incorporated into a product, or a secondary (recycled) raw material; excluding energy recovery and the use of the product as a fuel. A packaging or packaging component is recyclable if its successful post-consumer collection, sorting, and recycling is proven to work in practice and at scale. Its main packaging components, together representing >95% of the entire packaging weight, need to be recyclable and the remaining minor components need to be compatible with the recycling process and to not hinder the recyclability of the main components. Please note that oxo-degradable plastics do not fall under this definition and should not be considered as recyclable packaging.

Single use plastic: Single-use plastics, or disposable plastics, are used only once before they are thrown away or recycled. These items are things like plastic bags, straws, coffee stirrers, soda and water bottles and most food packaging. Non-retail and operational packaging should be included.

Recycled material: Material that has been reprocessed from recovered (or reclaimed) material by means of a manufacturing process and made into a final product or a component for incorporation into a product. Recovered material is defined as material that would have otherwise been disposed of as waste or used for energy recovery, but has instead been collected and recovered (or reclaimed) as a material input, in lieu of new primary material, for a recycling or manufacturing process. This only includes post-consumer recycled material.

Packaging: Packaging refers to all materials used to wrap, serve or protect goods. This only includes post-consumer packaging, which includes packaging waste produced during the shipping process, before having reached the company's end consumer or customer, as well as the packaging waste produced by the company's end consumer or customer after having used or consumed the product. This means that we expect companies to also include non-retail (e.g. polybags used during shipping) and operational packaging (e.g. plastic bags in stores, e-commerce packaging).

Post-consumer waste: Waste not limited to the company's end consumer, but to any party receiving the final packaged product, and includes B2B packaging. Post-consumer waste is distinguished from pre-consumer waste, which is the reintroduction of manufacturing scrap back into the manufacturing process. Materials used in the product itself are not to be included, only materials used to ship and package the products sold or provided to consumers and/or customers.

Data Requirements

Companies in the RTS Retailing and FDR Food & Staples Retailing industries should only consider their own-branded products. This only applies to these two industries.

Companies in FDR Food & Staples Retailing Industry that are classified as drug retailers, should mark this question as "Not Applicable" and provide a brief explanation in the comment box.

Companies in the Casinos & Gaming industry (CNO) that are only into online gaming should mark "Not Applicable" and provide an explanation in the comment box.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company addresses environmental aspects in its packaging strategy	Applicable
Measurable group-wide and time-bound commitment to reduce the volume and/or weight of packaging	YES
Programs to increase the use of reusable packaging	-
Programs to increase the use of recyclable packaging	YES
Programs to phase out single-use plastic packaging	YES
Programs to increase the use of recycled material as packaging solutions	YES
Programs to ensure that recyclable packaging is recycled	YES
Allocation of R&D resources to sustainable packaging and alternative solutions	YES

Questionnaire

Please indicate whether your company has a group-wide commitment in place and associated programs regarding its use of packaging.

1. (●)

   We address environmental aspects in our packaging strategy.

   Please indicate which group-wide commitment and associated programs you have in place to address and improve packaging solutions, and where this information is available in your **public reporting** or **corporate website**. We expect publicly available supporting evidence for each tick box.

   1. [x] Measurable group-wide and time-bound commitment to reduce the volume and/or weight of packaging.
   2. [ ] Programs to increase the use of reusable packaging.
   3. [x] Programs to increase the use of recyclable packaging.
   4. [x] Programs to phase out single-use plastic packaging.
   5. [x] Programs to increase the use of recycled material as packaging solutions.
   6. [x] Programs to ensure that recyclable packaging is actually recycled.
   7. [x] Allocation of R&D resources to sustainable packaging and alternative solutions.
