Question: Health & Nutrition Revenues
Include Modeled Scores : Yes

Health & Nutrition Revenues

Question

Does the company track revenues derived from food & beverage products that meet the criteria for healthy products?

Rationale

Nutritional profiling systems are essential for companies to align their products with health and wellness trends. As consumer awareness of diet-related health issues grows, these systems help companies meet the demand for healthier options. They also support regulatory compliance, ensuring products meet local and international health standards, which is increasingly important as governments impose stricter food regulations.

Beyond compliance, nutritional profiling enhances a company's brand reputation by demonstrating a commitment to corporate social responsibility and public health. This, in turn, builds consumer trust. Profiling also drives product innovation, helping companies reformulate existing products or create new, healthier alternatives, which can give them a competitive edge in the market.

Additionally, nutritional profiling systems offer a data-driven approach to portfolio management, allowing companies to make informed decisions about product development and improvement. This focus on health and sustainability not only benefits consumers but also supports long-term business success by aligning with market trends and public health priorities.

The purpose of this question is to evaluate the company's ability to generate revenue from healthy products. By understanding the proportion of revenue derived from healthy products, stakeholders can better assess the company's commitment to a healthier society.

Performance Summary	
Question Level Company Performance	80
Question Weight	33
Year-on-Year Change	12
Industry Average Score	16
Industry Highest Score	85

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Nutrition Profiling System (NPS): Structured frameworks or methodologies used to evaluate and classify the nutritional quality of foods and beverages. These systems assess products based on factors such as nutrient content, ingredient composition, and health impacts. The goal is to provide a clear, standardized way to compare products, support healthier choices, and guide product reformulation by highlighting aspects like levels of sugar, salt, fats, and essential nutrients.

Healthy products: Are products with a nutritional value that meet thresholds defined by pre-selected nutritional profiling systems, namely: Health Star Rating (HSR) and NutriScore. Products are healthy if a HSR score greater or equal to 3.5 or a NutriScore of A or B is achieved.

For binary nutritional value classifications products are considered if the classification has been achieved. Binary classifications include:

- UK Nutrient Profiling Model (HFSS)
- Malaysian Healthier Choice logo
- Singapore Healthier Choice symbol
- Thailand Healthier Choice logo
- Nutrient-based warning legends

Data Requirements

Description: If the nutritional profiling system used is not listed, please provide a clear and concise description and provide supporting evidence describing the nutritional profiling system and product portfolio performance achieved.

Revenue: Enter in the revenues generated from healthy products over the last 4 years.

Data Consistency: If the company does not disclosure the absolute revenue generated from products that meet the nutritional profiling system's criteria to be considered healthy or reports this information using other metrics (e.g., percentage of production volume), then select the Data Consistency option. If possible, convert the company's reported information to revenue estimates and provide an explanation of the conversion in the textbox.

Total Food & Beverage Revenue: Information has been pre-filled using the sector activity mapping from Trucost, an S&P Global company, and has been derived from public sources and best estimates using analyst judgement using data from the most recent financial year. Non-food & beverage related revenue (e.g., animal/pet food) has been excluded.

Review and if necessary, update or complete the row 'Total food & beverage revenue', providing an explanation for the change, as well as relevant references or detailed descriptions.

If the sector activity mapping from Trucost has not found any information, the company's total revenues from 0.1 Denominator will be used to pre-fill Total Food & Beverage Revenue.

Healthy products: Provide the percentage of products assessed to be healthy and indicate the nutritional profiling system used to calculate the portfolio performance:

- For Health Star (HSR), please indicate the percentage of products achieving a score of ≥ 3.5.
- For NutriScore, please indicate the percentage of products achieving a score of A or B.
- For Binary Classification Systems, please indicate the percentage of products that achieved Non-HFSS, compliance or pass.

In case the company reports product portfolio performance using multiple nutritional profiling systems, please report performance for either HSR or NutriScore (if available). If data for either is available, please report data for HSR, or giving preference to data that has been externally verified.

The question is not applicable to the company: All request to mark "The question is not applicable to the company" must be supported with an explanation in the additional comment textbox.

- Agricultural Products (incl. meat, poultry, dairy, etc.): "The question is not applicable to the company" can be accepted only if the company does not generate more than 10% of its revenue from processed food & beverage products.
- Alcoholic beverage: "The question is not applicable to the company" can be accepted if the company generates more than 90% of its revenue from alcoholic beverages.
- Bottling companies: "The question is not applicable to the company" can be accepted if the company generates more than 90% of its revenue from bottling activities.
- Drug Retailers: "The question is not applicable to the company" can be accepted if the company generates more than 90% of its revenue from drug retailing only.

Disclosure Requirements

Disclosure requirements for partially public question: Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Total revenue from healthy products for at least the most recent reported year.

Supporting evidence: The document(s) you attached will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.

Quantitative figures provided in the response do not need supporting evidence, given the qualitative portion is accepted. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information. The supporting document does not need to be available in the public domain.
