Gender Pay Indicators

Question

Does the company track the results of its gender pay gap or equal pay analysis?

Rationale

This question assesses a company's pay practices by evaluating the results of its gender pay assessments. An increasing number of countries are adopting regulations that require companies to conduct such pay assessments and disclose the results, making this topic of high strategic importance. Furthermore, unequal pay and gender pay gaps threaten a company's ability to attract and retain women employees, lower employee engagement and can cause reputational damage.

Performance Summary	
Question Level Company Performance	37
Question Weight	15
Year-on-Year Change	(22)
Industry Average Score	28
Industry Highest Score	79

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Executive level: Employees who have an executive function and play a strategic role within an organization. They hold senior positions and impact companywide decisions. Executives usually report directly to the CEO. The CEO is included in the definition of executive level.

Management level: All management-level positions from first-line/junior managers up to top/senior managers with a reporting line two levels or fewer from the CEO. Excludes executive-level positions. Managerial functions are those that involve planning, policymaking, strategizing, leading and controlling.

Non-management level: Employees in charge of executionary functions, such as production and administrative positions. These employees have limited or no managerial role.

Other cash incentives: Monetary incentives paid on top of the employee's regular salary to reward employees for job performance or longevity. These incentives have an explicit monetary value and can include rewards such as bonuses and stock options.

Equal pay: Equal pay compares the salary of men and women who have the same or equivalent positions to assess whether they are paid the same for equal work.

Gender pay gap: The gender pay gap is the difference in average gross hourly earnings between women and men; it, therefore, assesses the difference in pay at the aggregated level. The gender pay gap does not take into account all the different factors that may play a role, such as education, hours worked, job type, career breaks or part-time work. However, it reflects the work that women do and their position in the company hierarchy, also indicating the equality of opportunities to develop one's career and access higher-paid positions.

Mean gender pay gap: The difference between the mean hourly pay rate of male full-pay relevant employees and that of female full-pay relevant employees. The mean gender pay gap is calculated as follows: **(Men's Salary - Women's Salary)/ Women's Salary,** and it should be expressed in percentage. If you are using an alternative method for your calculations, kindly adjust the figures according to the formula provided above.

As an example:
Mean salary men 60'000;
Mean salary women 55'000;
Mean gender pay gap = (60'000 - 55'000) / 55'000 = 0.09 = 9%

Median gender pay gap: The difference between the median hourly pay rate of male full-pay relevant employees and that of female full-pay relevant employees.

Mean bonus gap: The difference between the mean bonus paid to male relevant employees and female relevant employees.

Median bonus gap: The difference between the median bonus paid to male relevant employees and female relevant employees.

Coverage: Please select the coverage range on which the company is reporting. For example, if the company is reporting on its employees in country ABC, and these employees make up 80% of its total workforce, please select the coverage range ">75%."

Data Requirements

Disclosure requirements for partially public question: Additional credit will be granted for relevant publicly available evidence disclosing the metrics requested either for equal remuneration or the gender pay gap.

If the company conducts both equal pay and gender pay gap assessments, please select which option the company has data for the highest proportion of employees.

Please note: If the company has fewer than 100 employees or zero employees in its organization, then **please mark "The question is not applicable to the company".**

International standards: ILO convention No. 111

The gender equality questions were developed in collaboration with **EDGE**, leveraging its robust research on gender equality. EDGE is the leading global assessment methodology and business certification standard for gender equality. It measures where organizations stand in terms of gender balance across their pipeline, pay equity, effectiveness of policies and practices to ensure equitable career flows, and inclusiveness of their culture. Launched at the World Economic Forum in 2011, EDGE is designed to help companies not only create an optimal workplace for women and men but also benefit from it. EDGE stands for Economic Dividends for Gender Equality and is distinguished by its rigor and focus on business impact. EDGE Certification's diverse customer base consists of 200 large organizations in 44 countries across five continents, representing 29 different industries and employing more than 2.4 million employees internationally.

The study **"Do Firms Respond to Gender Pay Gap Transparency?"** (January 2019) examined the effect of pay transparency on the gender pay gap and firm outcomes by examining a 2006 policy change in Denmark that required firms to provide gender disaggregated wage statistics. Using detailed data and a differences-in-differences statistical approach, Bennedsen et al. found that the law did reduce the gender pay gap.
