Grupo Bimbo, S.A.B. de C.V.

Sustainable1

SURVEY RESPONDENT **Methodology Year:** 2024 **GICS Sector:** Consumer Staples **ESG Score Industry:** FOA Food Products

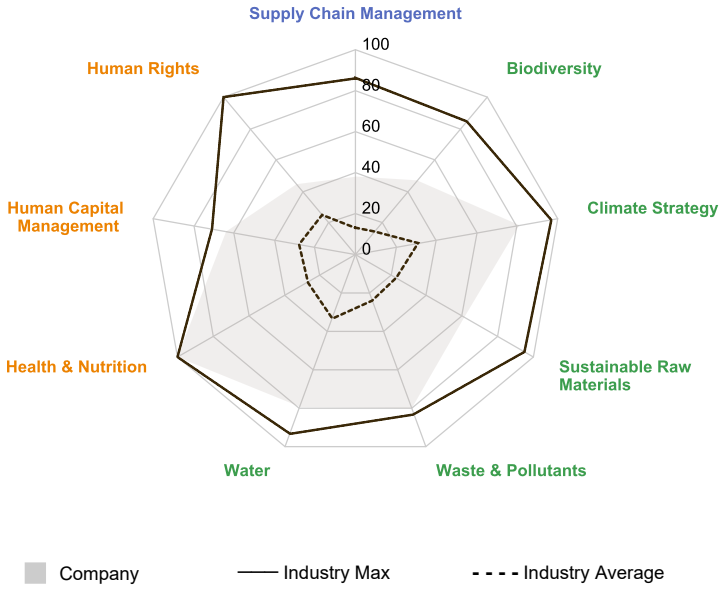

Grupo Bimbo, S.A.B. de C.V., together with its subsidiaries, produces, distributes, and sells various bakery products. It offers sliced bread, buns and rolls, pastries, cakes, cookies, toast, English muffins, bagels, tortillas and flatbreads, and salty snacks. The company provides its products under various brands. It operates bakeries and other plants in Mexico, the United States, Europe, Asia, and Africa. Grupo Bimbo, S.A.B. de C.V. was founded in 1945 and is headquartered in Mexico City, Mexico.

The ESG Score of Grupo Bimbo, S.A.B. de C.V. is 61 out of 100. The score is most heavily weighted to Environmental Dimension, followed by Social Dimension and finally Governance & Economic Dimension.

Compared to the previous year, the disclosure based CSA Score is 59 which is higher by 7 points. The most material drivers by weight are Climate Strategy, Human Capital Management, Supply Chain Management.

Company Performance - ESG Score

S&P Global has selected the most relevant criteria in each dimension based on their weight in the assessment and their current or expected significance for the industry.

Survey Respondent

This company is a Corporate Sustainability Assessment ("CSA") survey respondent. Its ESG Score is based on the company's responses to the S&P Global Corporate Sustainability Assessment ("CSA"), information available in the public domain and modeling approaches. The CSA focuses on the quality of company disclosures as well as past and current performance on ESG issues.

Controversies Summary

Grupo Bimbo, S.A.B. de C.V.'s ESG Score has not been impacted by any recent controversies.

This document is for authorized use as per agreement with S&P Global Market Intelligence Inc.

SURVEY RESPONDENT **Methodology Year:** 2024 **GICS Sector:** Consumer Staples **ESG Score Industry:** FOA Food Products

Disclosure Analysis

S&P Global ESG Scores are built using public data, in addition to documents companies submit that may/may not be available in the public domain. The disclosure analysis tool is used to identify a company's overall disclosure transparency between questions that require public information (CSA Required Public Disclosure questions) or questions that allow for additional disclosure to what the CSA expects to be publicly available (CSA Additional Disclosure). Importantly, the CSA measures performance, not solely disclosure, and while a company may disclose data exhaustively, they may not perform well. This is captured by the difference in the "Potential Score Based on Disclosure" and the "Actual Score Based on Disclosure" which represents S&P Global's opinion on the performance of the disclosed information.
Grupo Bimbo, S.A.B. de C.V.'s data availability is very high within the FOA Food Products industry, as it made available 84% and 86% of the required and additional disclosures.

CSA Required Public Disclosure

Evidence used to corroborate company performance in the CSA must be publicly available to score any points.

CSA Additional Disclosure

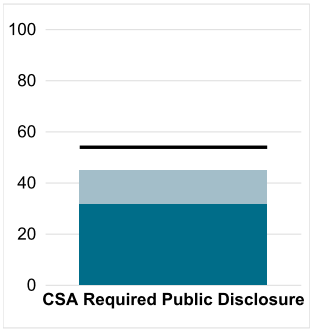

Company disclosure that is additional to what the CSA expects to be publicly available. Corroborating evidence need not be publicly disclosed.

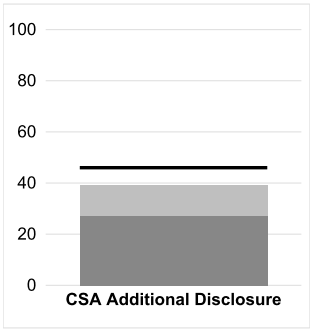

Modeled Scores

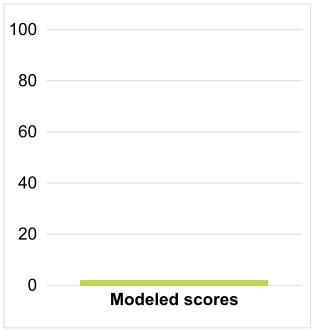

A modeled proxy measurement of a company's ESG performance in the absence of disclosed underlying data. Modeled Scores take a light-touch approach and represent the contribution to the total ESG Score where the ESG Scores have been modeled in the absence of disclosed underlying data. Companies that champion transparency and disclosure will have lower values for modeled scores whereas companies that do not disclose publicly or through the CSA will have greater modeling included. This approach effectively minimizes data gaps by imputing values, providing a more robust and useful dataset in absence of disclosed data by a company.

SURVEY RESPONDENT **Methodology Year:** 2024 **GICS Sector:** Consumer Staples **ESG Score Industry:** FOA Food Products

Industry Drivers

Demographic changes, urbanisation, socio-political developments and pandemics cause disruption to the entire value chain of the food products industry. Sustainable ingredients, along with convenience and nutrition, remain key considerations. Food product producers must review existing supply chain strategies and address inefficiencies such as food loss and waste. The industry is expected to focus on the risks and impacts of climate change by implementing appropriate transition strategies. Companies are also facing the reputational risks of failing to effectively monitor their supply chains and being associated with anti-competitive practices. There are high expectations for companies to uphold commitments to eliminate the negative impacts of their agricultural commodity supply chains. This requires, among others, preventing the destruction of natural habitats, promoting biodiversity in existing food systems, as well as respecting human rights and labour standards.

Industry Overview

	Total CSA Score	Environmental Dimension	Social Dimension	Goverance & Economic Dimension
Charoen Pokphand Foods Public Company Limited	**85**	86	88	79
Grupo Nutresa S. A.	**77**	77	79	74

Industry Score Distribution

The percentage of companies in the industry that have a score within the score distribution.

S&P Global ESG Score

The S&P Global ESG Score measures a company's performance on and management of material ESG risks, opportunities, and impacts informed by a combination of company disclosures, media and stakeholder analysis, modelling approaches, and in-depth company engagement via the S&P Global Corporate Sustainability Assessment (CSA). The S&P Global ESG Score is a relative score measuring a company's performance on and management of ESG risks, opportunities, and impacts compared to their peers within the same industry classification. The S&P Global ESG Score uses a double materiality approach whereby a sustainability issue is considered to be material if it presents a significant impact on society or the environment and a significant impact on a company's value drivers, competitive position, and long-term shareholder value creation.

S&P Global CSA Score

The S&P Global Corporate Sustainability Assessment (CSA) Score is the S&P Global ESG Score without the inclusion of any modelling approaches.

Dimension Level Scores

The weighted score of all aggregated criteria level scores within one of the Dimensions (Environmental, Social or Governance & Economic).

Criteria Level Scores

Criteria level scores represent the significant material ESG themes within industries, which roll up into the three dimension level scores based on S&P Global's materiality-weighted scoring framework. There are approximately 15-30 criteria per industry, consisting of both general themes applicable across industries (such as Corporate Governance, Climate Strategy, Labor Practice indicators, among others), and industry-specific themes (such as Sustainable Finance, Electricity Generation, Social Impact on Communities, Passenger Safety, among others).

Comparison to Industry

Percentile ranking, industry average and industry max scores are calculated based on the industry. Related statistics may include a mix of current and past assessment year scores. All values are on a scale from 0 to 100 (max).

Weights

For each industry, our scores prioritize ESG factors based on their expected magnitude (degree of impact) and the likelihood of their impact (probability and timing of impact) on a company's financial standing, according to growth, profitability, capital efficiency, and risk measures. Factors are additionally assessed according to their overall impact and importance on stakeholder and the natural environment. For each row, weights are shown as a percentage of the total weight of 100.

This document is for authorized use as per agreement with S&P Global Market Intelligence Inc.

Question Level Scores

Corporate data is collected through roughly 130 questions, found in general and industry-specific criteria. Points are assigned to companies through a pre-defined, transparent, and rules-based scoring system, weighted according to the relevance and materiality of underlying topics to financial outcomes to systematically generate weighting.

Weighted Score

The weighted score is a score multiplied by relevant weight. This indicates scores contribution to criteria or dimension score.

NAP definition

When a question receives an NAP score, indicating that the question is not applicable to the company, its weight is redistributed among other questions within the same criterion. If a criterion receives an NAP score, its weight is redistributed among other criteria within the same dimension.

Glossary

S&P Global ESG Score

The S&P Global ESG Score measures a company's performance on and management of material ESG risks, opportunities, and impacts informed by a combination of company disclosures, media and stakeholder analysis, modeling approaches (prior to the 2023 CSA, the S&P Global ESG Score did not contain any modeling approaches), and in-depth company engagement via the S&P Global Corporate Sustainability Assessment (CSA). The S&P Global ESG Score is a relative score measuring a company's performance on and management of ESG risks, opportunities, and impacts compared to their peers within the same industry classification.
The S&P Global ESG Score uses a double materiality approach whereby a sustainability issue is considered to be material if it presents a significant impact on society or the environment and a significant impact on a company's value drivers, competitive position, and long-term shareholder value creation.

S&P Global CSA Score

The S&P Global Corporate Sustainability Assessment (CSA) Score is the S&P Global ESG Score without the inclusion of any modelling approaches.

Dimension Level Scores

The weighted score of aggregated criteria level scores within one of the Dimensions (Environmental, Social or Governance & Economic).

Criteria Level Scores

Criteria level scores represent the significant material ESG themes within industries, which roll up into the three dimension level scores based on S&P Global's materiality-weighted scoring framework. There are approximately 15-30 criteria per industry, consisting of both general themes applicable across industries (such as Corporate Governance, Climate Strategy, Labor Practice indicators, among others), and industry-specific themes (such as Sustainable Finance, Electricity Generation, Social Impact on Communities, Passenger Safety, among others).

Question Level Scores

Corporate data is collected through roughly 130 questions, found in general and industry-specific criteria. Points are assigned to companies through a predefined, transparent, and rules-based scoring system, weighted according to the relevance and materiality of underlying topics to financial outcomes to systematically generate weighting.

NAP Definition

When a question receives an NAP score, indicating that the question is not applicable to the company, its weight is redistributed among other questions within the same criterion. If a criterion receives an NAP score, its weight is redistributed among other criteria within the same dimension.

Weights

For each industry, our scores prioritize ESG factors based on their expected magnitude (degree of impact) and the likelihood of their impact (probability and timing of impact) on a company's financial standing, according to growth, profitability, capital efficiency, and risk measures. Factors are additionally assessed according to their overall impact and importance on stakeholder and the natural environment.

ESG Score Industry

Industry grouping applied in the Corporate Sustainability Assessment (CSA) as derived from the Global Industry Classification Standard (GICS). Industry designations determine the specific questions and weightings used for a company in the CSA. The Global Industry Classification Standard (GICS) GICS is an industry taxonomy developed by S&P Global and MSCI for use by the global financial community. The GICS structure consists of 11 sectors.

Assessment Type

Survey Respondent: Company is a Corporate Sustainability Assessment (CSA) survey respondent

Public Assessment: Company is NOT a Corporate Sustainability Assessment (CSA) survey respondent.

Double Materiality

We define an ESG issue as material if it presents a significant impact on society or the environment, and might have a significant impact on company's value drivers, competitive position, and long-term shareholder value creation. Material ESG issues can significantly affect an entity's business operations, cash flows, legal or regulatory liabilities, and access to capital. They can also significantly improve or undermine an entity's reputation and relationships with key stakeholders and society, as well as the environment. Over time, external impact on society and environment also translates into internal impact on a company itself, including its financial value drivers. These impacts may be direct or indirect, including ripple effects through the value chain, upstream or downstream. As such, S&P Global considers double materiality as an integral part of the analysis of corporate ESG performance.

Modeled Scores

In order to provide a more complete and holistic assessment of a company's sustainability performance, modeling approaches are applied and aggregated into the S&P Global ESG Score to address gaps in disclosure. The purpose of this modeling approach is to emulate the performance-based scoring that could have been applied if reported data were available. More than 40% of underlying questions in the CSA require publicly available data to score any points. No modeling is applied to questions where underlying data is required to be in the public domain, and therefore no points will be granted to a company should this information not be available. Another approximately 40% of questions in the CSA do not require information to be publicly disclosed to score points, but additional points are granted to companies that do so. If no information is disclosed by the company on such questions, the question-level score is modeled, excluding the points attributed for transparency.

S&P Global provides this level of transparency across disclosure and modeling approaches to ensure users of ESG Scores have access to the most pertinent data and analysis for their use cases.

This document is for authorized use as per agreement with S&P Global Market Intelligence Inc.

Glossary (cont.)

Disclosure Analysis (Transparency)

S&P Global ESG Scores are built using public data, in addition to documents companies submit that may/may not be available in the public domain. The disclosure analysis tool is used to identify a company's overall disclosure transparency between questions that require public information (CSA Required Public Disclosure questions) or questions that allow for additional disclosure to what the CSA expects to be publicly available (CSA Additional Disclosure). Importantly, the CSA measures performance, not solely disclosure, and while a company may disclose data exhaustively, they may not perform well. This is captured by the difference in the "Potential Score Based on Disclosure" and the "Actual Score Based on Disclosure" which represents S&P Global's opinion on the performance of the disclosed information.

CSA Required Public Disclosure

Evidence used to corroborate company performance in the CSA must be publicly available to score any points.

CSA Additional Disclosure

Company disclosure that is additional to what the CSA expects to be publicly available. Corroborating evidence need not be publicly disclosed.
